# WAVE Evaluation

Nomad Narratives

Welcome Page *(Landing page)*

Passed with alerts

Two alerts we directed towards the supporting text on the hero section, neither of which needed to be headings.

The third alert is for the welcome page like. I ignored this as I wanted users to have a clear indication of what page they are on.

The final alert was for the <noscript> tag in index.js. It advised me to remove it because most users have it installed by default, but I chose not to remove it as I wanted to be considerate to as many users as I could.
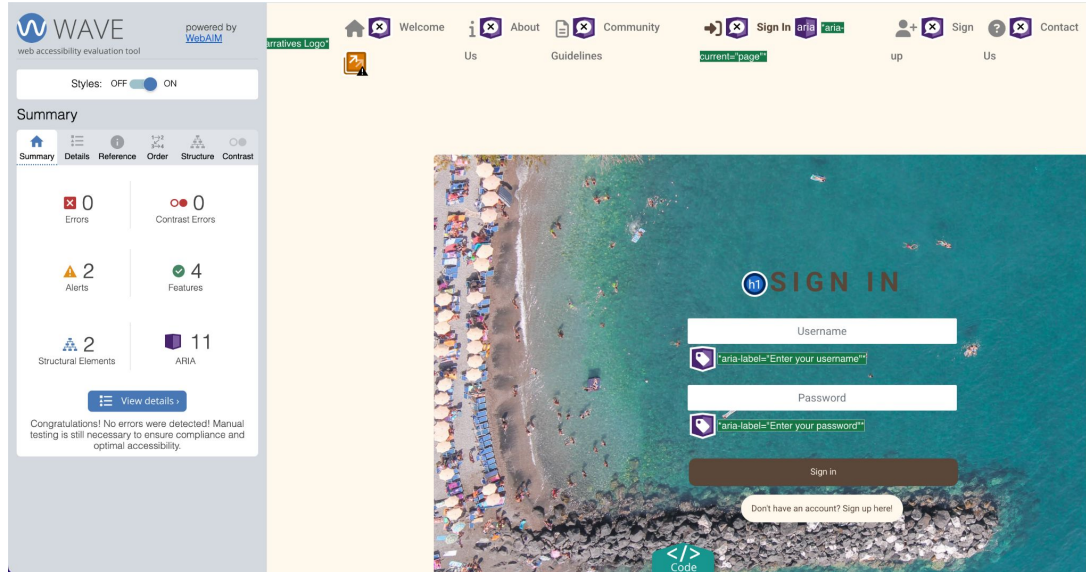

Sign Up Page

Passed with alerts

One of the alerts is for a redundant link (welcome/homepage link attached to the nav logo).

The other is for the <noscript> element.

## *Passed with alerts*

One of the alerts is for a redundant link (welcome/homepage link attached to the nav logo).
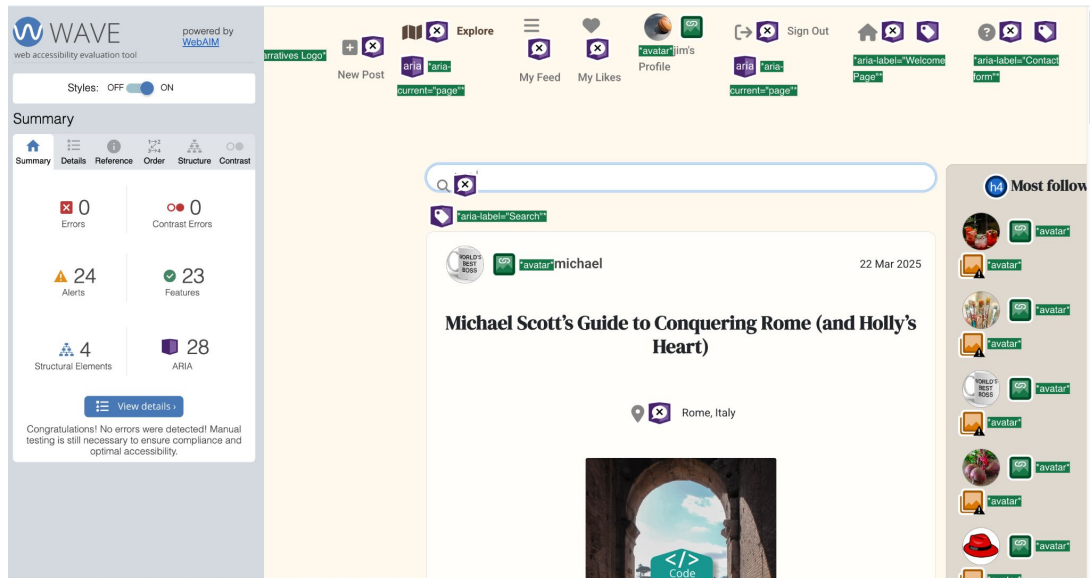

The other is for the <noscript> element.

New Post Page

The seven alerts are largely for suspicious text link and redundant links.

- The link in the form is to the contact page which I have decided to include for improved UX.
- The 'redundant alt text' error is simply an intentional duplicate message.

Explore/ My Feed/ My Likes

*Pages combined as they have the same layout and content.*

Passed with alerts

Most of the alerts were caused by the users avatars having the same alt text.

There were also alerts for redundant links and suspicious link text ('read more') at the end of each post preview.

User Profile

Passed with alerts

Most of the alerts are for duplicate alt text due to the use avatars.

Other alerts are due to the 'read more' links and comment icons which are deemed redundant because they like to the same post.

Contact Form Page

Passed with alerts

One of the alerts is for a redundant link (welcome/homepage link attached to the nav logo).

The other is for the <noscript> element.

Not Found Page

Passed with alerts

One of the alerts is for a redundant link (welcome/homepage link attached to the nav logo).

The other is for the <noscript> element.
